

Classification of Vulvar Intraepithelial Neoplasia

(Termination date: April 30, 2009)

This activity has been planned and produced in accordance with ACCME Essentials. The estimated time to complete this activity is 1 hour.

Instructions: Read the article beginning on page 62 and select the best answer for each of the following questions. Test form and mailing instructions are on the next page.

- 1. Today, the incidence of vulvar intraepithelial neoplasia (VIN) is almost:**
 - a. 0.5/100000 women.
 - b. 1/100000 women.
 - c. 2/100000 women.
 - d. 3/100000 women.
- 2. About 90% of high-grade VIN cases are associated with:**
 - a. human immunodeficiency virus infection (HIV).
 - b. human papillomavirus infection (HPV).
 - c. cervical intraepithelial neoplasia (CIN).
 - d. ovarian carcinoma.
- 3. The 3-tier classification system for VIN was revised in 2004 because:**
 - a. VIN 1 does not represent dysplasia.
 - b. observer classification of VIN was inconsistent.
 - c. VIN is really a subclassification of CIN.
 - d. VIN 1 has not been shown to be a precursor for invasive cancer.
- 4. The current classification of VIN:**
 - a. is primarily based on age and HPV association.
 - b. combines VIN 2 and 3.
 - c. recognizes the unique status of VIN 1.
 - d. is all of the above.
- 5. The hallmark of VIN, usual type, is:**
 - a. association with progression to invasive cancer.
 - b. occurrence during pregnancy.
 - c. relationship with menopause.
 - d. restriction to HIV-positive women.
- 6. Differentiated VIN accounts for approximately what percentage of VIN cases?**
 - a. less than 5%.
 - b. less than 10%.
 - c. 15% to 20%.
 - d. 25% to 33%.
- 7. Differentiated VIN is always viewed as:**
 - a. an indolent lesion.
 - b. a medium-grade lesion.
 - c. a high-grade lesion.
 - d. a precursor to CIN.
- 8. When VIN occurs in hair-bearing areas, it is necessary to:**
 - a. increase the depth of treatment penetration.
 - b. follow up with chemotherapy.
 - c. follow up with targeted radiotherapy.
 - d. perform a total vulvectomy.
- 9. The only form of excision associated with recurrence is:**
 - a. laser ablation.
 - b. superficial vulvectomy.
 - c. electrocautery.
 - d. cryotherapy.
- 10. The age distribution of vulvar squamous cell carcinoma:**
 - a. peaks at 75 years.
 - b. peaks at 30 years.
 - c. is bimodal.
 - d. is similar among all age groups.

Classification of Vulvar Intraepithelial Neoplasia

For you to obtain credit, 70% or more of your answers must be correct. To cover costs of processing, please enclose a check for \$15, which is tax-deductible, payable to the Albert Einstein College of Medicine, and mail with this answer sheet to:

Albert Einstein College of Medicine
Center for Continuing Medical Education
Attn: TFP
3301 Bainbridge Avenue
Bronx, NY 10467

Participants will receive certification for their records in approximately 4 to 6 weeks.

Course Evaluation

Albert Einstein College of Medicine is interested in your opinion. Please take a moment to evaluate this activity.

1. In comparison with other activities, how would you rate this activity?

- Excellent Good Fair Poor

2. Did this activity meet the stated objectives? Yes No

Comments: _____

3. What percentage of the material is new to you?

- 100% 75% 50% 25% 0%

Please give two examples of what you learned:

4. As a result of your participation in this activity are you making any changes in your practice? Yes No

Please give two examples:

5. Were any portions of this activity unsatisfactory or inappropriate? Yes No
If so, which?

6. Do you find the information presented in this activity to be objective, balanced, and of scientific rigor? Yes No

Comments: _____

7. In your opinion, were the authors biased in their discussion of any commercial product or service? Yes No

Comments: _____

8. Is there subject matter you would like included in the future? Yes No

Comments: _____
