

AMA/CME Test 216

External Genital Warts

(Test valid through November 30, 2002)

This activity has been planned and produced in accordance with ACCME Essentials.
The estimated time to complete this activity is 1 hour.

Instructions: Read the article beginning on page 50 and select the best answer for each of the following questions.
Test form and mailing instructions are on the next page.

1. What proportion of sexually active persons in the United States have clinically visible external genital warts (EGWs)?
 - a. 1 out of 1000
 - b. 1 out of 500
 - c. 1 out of 300
 - d. 1 out of 100
2. Which statement about human papillomavirus (HPV) is *true*?
 - a. More than 200 human HPV types have already been identified.
 - b. Up to 40 different types of HPV can infect the genitalia.
 - c. The two HPV types that most commonly cause EGWs are likely to cause anogenital cancers.
 - d. Exposure to HPV causes EGWs to develop within 1 to 2 weeks.
3. What is the most common location of EGWs in women?
 - a. vulva
 - b. vagina
 - c. perineum
 - d. anus
4. Cauliflower-shaped warts appearing on moist genital surfaces are likely to be:
 - a. condylomata lata.
 - b. condylomata acuminata.
 - c. keratotic warts.
 - d. papular warts.
5. Although biopsy is seldom necessary in patients with EGWs, it is recommended when lesions are:
 - a. larger than 2 cm in diameter.
 - b. pigmented.
 - c. fixed to underlying tissue.
 - d. all of the above.
6. Which treatment for EGWs is *least* likely to be painful?
 - a. podophyllin
 - b. cryotherapy
 - c. imiquimod
 - d. trichloroacetic acid
7. Which EGW treatment is no longer recommended by a European panel?
 - a. podophyllin
 - b. podofilox solution
 - c. bichloroacetic acid
 - d. trichloroacetic acid
8. What is the recommended dosing schedule for imiquimod 5% cream?
 - a. once nightly, for up to 16 weeks
 - b. 3 nights weekly, for up to 16 weeks
 - c. 3 nights weekly, for up to 8 weeks
 - d. once weekly, for up to 24 weeks
9. Approximately what proportion of women with EGWs experience partial or complete responses to imiquimod?
 - a. 50%
 - b. 60%
 - c. 70%
 - d. 80%
10. Imiquimod is more effective in women with EGWs than in similarly afflicted men. Females' superior response can be attributed to all of the following *except*:
 - a. shorter duration of warts before treatment is sought.
 - b. a more vigorous immune response.
 - c. larger, more easily visible warts.
 - d. tendency for warts to appear on thin mucosal surfaces, rather than on heavily keratinized skin.

THE FEMALE PATIENT®/ Test 216

External Genital Warts

(Test valid through November 30, 2002. No credit will be given after that date.)

Record your answers here by circling the appropriate letter:

1. a b c d
2. a b c d
3. a b c d
4. a b c d
5. a b c d
6. a b c d
7. a b c d
8. a b c d
9. a b c d
10. a b c d
